Jacksonville, FL | 507-271-2799 | prithish.shan@gmail.com | [linkedin.com/in/prithish-shan/](https://www.linkedin.com/in/prithish-shan/) | github.com/prithishshan

EDUCATION

Carnegie Mellon University

B.S. Information Systems, additional major in Artificial Intelligence

GPA: 3.5/4.00; Dean's List

Relevant Coursework: Principles of Imperative Computation, Principles of Functional Programming, Concepts of Mathematics (discrete), Matrices & Linear Transformations, Reasoning with Data

Pittsburgh, PA

Aug 2025 - May 2029

WORK EXPERIENCE

Cofounder & Software Engineer | MyoVerse

Jan 2026 – present

- Developing data processing and classification pipeline for neuro-muscular disorders from signals measured through proprietary EMG sensor platform using CNNs
- Designed and deployed web API and database capable of storing millions of sensor samples using Postgres and Lambda on AWS
- Wrote embedded systems firmware for MCU to facilitate IMU and EMG sensor polling and data transmission over Bluetooth in C on Zephyr RTOS platform
- Developed user-friendly mobile interface in Dart to communicate with MCU over BLE and log data in web API to validate consumer version of sensing platform
- Designed and Deployed startup landing page using Next.js

Research Intern | Mayo Clinic - Van Blitterswijk Lab

June 2023 – Apr 2024

- Developed machine learning pipeline in research setting to characterize novel RNA splicing in genetic cases of ALS and FTLD from long-read mRNA sequencing data
- Automated high-performance computing workflows with shell scripts, trained and optimized multilayer perceptrons, support vector machines, and random forest models using Bayesian hyperparameter tuning and cross-validation
- Pipeline enabled us to identify prognostic RNA transcripts and train models for predicting clinical outcomes from unseen patient transcriptomic data
- Presented [research poster](#) to clinicians and researchers at Mayo Clinic, regional, and state conferences

SELECTED PROJECTS & AWARDS

SAP Intelligence Track 1st Prize | ProdHacks @ CMU

Feb 2026

- Built generative AI ideation platform in 24 hours to allow product managers to generate and iterate on 3d models from just natural language input, awarded 1st prize by decision makers from SAP

Distributed GPU Computing Platform | TartanHacks

Feb 2026

- Built solution to remedy expensive GPU computing that splits parallelizable GPU tasks into jobs that clients can complete asynchronously from nothing but a browser tab
- Implemented Next.js app, Postgres database with concurrency handling, and centralized document storage in S3 in 24 hours

Zoning Compliance Copilot

Dec 2025 – Jan 2026

- Architected and shipped MVP real estate feasibility platform using RAG for land discovery and analysis
- Designed geospatial data pipeline ingesting 100k+ land parcels into postGIS and indexing zoning documents with pgvector embeddings
- Implemented scalable Express.js API integrating LangChain agents to power Angular frontend workflows
- Performed customer discovery with commercial real estate developers, including CEO of RISE Commercial

Event Monkey Calendar Automation App

Oct 2025 – Dec 2025

- Built production AI app that turns text or images into iCal calendar events
- Developed Node.js/Express backend on AWS, with Firebase auth and Flutter frontend
- Launched to Apple App Store, gaining 100+ organic users and \$5000 in funding through CMU's Swartz Center for entrepreneurship and AWS Startups.

Congressional App Challenge | Office of Congressman Aaron Bean

Oct 2023 – Mar 2024

- Won Congressional App Challenge representing FL-04 district and presented App at U.S. Capitol
- Architected and built app that teaches users about nearby historical sites via GPS
- Developed interface and web API to serve users in real time with streamed output from OpenAI API using React Native with Expo framework and Node.js with Typescript

SKILLS

AI/ML – TensorFlow, Pandas, Langchain, Deep learning, RAG

Web & Mobile – Next.js, Angular, PHP, Flutter, Expo

API/CLOUD – Node, Express, AWS (S3, RDS, Lambda)

Languages – C, Python, Java, Typescript, SQL
